Title: PUNA GEOTHERMAL ANNOUNCES SCHEDULED SHUTDOWN

Puna Geothermal Venture announced that a shutdown of its facility is scheduled for the period of April 10-15.

During the shutdown, PGV will complete improvements to the facility's brine handling system.

The shutdown has been coordinated with HELCO. All State and County agencies have been notified.

"We are increasing our brine handling capacity," stated Steven E. Morris, PGV's Vice President and General Manager, "this will allow us to handle more brine with better efficiency. To minimize the period of time the plant will be off line, much of the new pipeline has been prefabricated."

PGV has been producing electricity from clean, safe geothermal energy for more than 11 months. During that time, PGV has maintained an on-line reliability factor of nearly 98%.

SUBJ: BRINE SYSTEM MODIFICATIONS/SCHEDULE CHANGE

Dear Mr. Ahue,

As requested in your letter to us of October 13, 1993, Puna Geothermal Venture (PGV) hereby notifies you that we would like to undertake a planned power plant shutdown commencing on April 10 of this year or shortly thereafter for the purpose of completing improvements to our facility's brine handling system that will increase our brine processing capacity. These modifications were outlined in our initial request to your office of January 27, 1994.

We anticipate that these modifications will take approximately six (6) days to complete. We will advise you promptly should there be a major change in our plans.

Should you or your staff have any questions, please contact me.

Sincerely,

Thomas G. Kizis  
Environmental Manager
